thinh-tran-portfoliosite.netlify.app

Computer Science co-op student who ships production web apps, AI-agent automation, e-learning technology and analytics for real organizations, building with Claude Code agent teams.

Education

B.A., Computer Science (Honours), Co-op Program, York University, Toronto, ON Sep. 2024 – Expected 2027

- **Relevant Courses**: Data Structures & Algorithms, Computer Organization (A+), Database Systems, Software Design (UML, requirements, SDLC), Professional Practice in Computing (A), Software Tools
- **Prior Study**: Western University (2021–2024), including a year of media studies with hands-on **Adobe Premiere Pro** coursework
- **Certifications**: Mastering Design Patterns with Java (CodeSignal, Apr. 2026); Spring Boot REST API with Java & Gradle (CodeSignal, May 2026)

Work Experience

Learning Technology & AI Enablement Intern, Groupe Bel Canada, Mississauga, ON (Hybrid) Jul. 2026 – Present

- Orchestrated **Claude Code** agent teams with independent validators to build **30+ SCORM** e-learning packages for the company's global learning academy, including **18 capability courses** now live on the corporate LMS; bulk-created **12** learner communities and wrote catalogue metadata for **24** courses.
- Fixed a quiz-export defect that marked low scorers "failed" and kept them from completing a learning pathway: traced it in the package, rewrote its LMS reporting for **SCORM 2004** so a below-pass attempt stays open for retry, and proved both paths on a real SCORM engine.
- Restored full learner tracking after finding that replacement quizzes sent the LMS less data than the packages they replaced (interaction records, pass/fail status, session time), and made that reporting floor a standing release check.
- Designed a reusable PowerPoint-to-SCORM pipeline with automated release gates (manifest validation, live playback, LMS-reporting checks), and rebuilt a legacy quiz as three ~67 KB packages (from ~10 MB).
- Built and maintain a **Power BI** report (10 pages, **72 DAX measures**) tracking learning engagement for a **1,769-person** community across ~18,000 activity records, used by the team and refreshed weekly.
- Audited the LMS data export before modelling it, catching a sign-in total inflated **35**× and 25 of 49 columns carrying no information; wrote a 2-page weekly refresh guide for non-technical colleagues.
- Building a two-hour, demo-led **Microsoft Copilot** workshop for the team (delivering Oct. 19, 2026): 10 slide decks (89 slides) generated from source specs, a handout and a live Excel demo; packaged an AI-agent development workflow into onboarding kits for two colleagues.
- Rebuilt 2.4 hours of recorded system-training webinars into an 8-module narrated, subtitled video series using local transcription and offline text-to-speech (release pending).

SEO & Web Developer, Swimingo (via Riipen Labs), Remote Jul. 2026 – Sep. 2026

- Owned the Florida-expansion web workstream end to end, shipping **14 Florida pages** (a hub, 11 towns, 2 recruitment pages) into the company's **React/TypeScript/Vite** codebase across **6 merged pull requests**: routing, prerendering, sitemaps, **JSON-LD** structured data, canonicals and a boundary-checked linking mesh (swimingo.com/swim-lessons/fl).
- Took the first six Florida pages from **0 to 310** Google search impressions, with Cooper City on page one (average position 8.6) about five weeks after launch; every figure in the final report reproduces from raw **Google Search Console** exports.
- Diagnosed a wrong-address indexing leak (**17.5%** of impressions at baseline, **6.9%** by the end) and gated a unique title, description and single canonical on every public route at build time.
- Added build gates that fail the production build on unsupported claims, broken links or bad structured data, each proven by injecting the fault it guards against, after removing three water-safety claims the cited source did not support.

Technical Lead, UpNxxt (via Riipen Labs), Remote Jun. 2026

- Authored **Playwright** browser-automation scripts to walk an edtech product's signup and lesson flow as a real user, scraping the DOM to measure on-screen word count as a proxy for drop-off risk.
- Identified the first one or two lessons as the highest-leverage friction point and recommended an interactive, age-segmented redesign grounded in UNESCO, Nielsen Norman Group and cognitive-load research.
- Delivered a 17-slide customer-experience optimization report as Operations/Technical Lead on a 5-person team, owning 5 slides and generating the deck with python-pptx so it rebuilt after every edit.

Full Stack Developer (On Call), Pho Ginger, Toronto, ON | gingercuisine.ca | GitHub Mar. 2026 – Present

- Built and maintain a production ordering platform serving ~50 customers daily, as sole developer orchestrating Claude Code agents: storefront and staff dashboard in **Next.js 16**, **TypeScript**, **React 19**, **Tailwind v4**, **MongoDB Atlas**, Prisma and Vercel.

- Developed **13 typed REST API routes**, validating every JSON request body with Zod and recomputing every order total on the server to eliminate client-side price tampering.
- Hardened the platform with **HMAC-SHA256** signed session cookies, Redis sliding-window rate limits on 5 endpoints, CSRF origin checks and HSTS/security headers; cleared ~19 security advisories in a July 2026 dependency upgrade.
- Shipped owner-editable menu management (sold-out toggles, price overrides, photo uploads) and a background new-order alarm (desktop) the owner accepted in testing; a **22-test Playwright** end-to-end suite checks that menu edits reach the storefront and sold-out orders are rejected.

Inventory Management Associate, Aritzia Distribution Center, Vaughan, ON Apr. 2025 – Aug. 2026

- Managed real-time inventory tracking, **SKU accuracy** and stock reconciliation in a high-volume distribution environment using warehouse management systems (WMS) and barcode scanning.
- Maintained data integrity through cycle counting, variance reporting and Excel/CSV reporting, scaling inventory processes as volume increased.

Projects

AI-Powered Job-Application Pipeline, Solo Project (private) 2026

- Designed and built a **14-skill** multi-agent pipeline in **Claude Code** that tailors, fact-checks and packages job applications, blocking delivery on a hard auditor PASS/FAIL gate grounded in a cited truth database.
- Orchestrated cron-scheduled cloud agents that scan Gmail and create Calendar events through Claude's tool connectors, reducing daily job-search intake to a single digest review.
- Automated funnel reporting across **100+** tracked applications with a session hook that regenerates an interactive tracking dashboard on every run.

Portfolio Analytics Dashboard, GitHub 2026

- Built a full-stack analytics platform for 4 sample portfolios over 32 simulated securities with **React 18**, TypeScript, Redux Toolkit, Recharts and Vite over a **Python FastAPI** backend serving **18 REST endpoints** from an **8-table normalized PostgreSQL** schema with 5 composite indexes.
- Implemented a pure **NumPy** analytics engine computing 11 financial metrics from first principles, including Sharpe ratio, VaR/CVaR, max drawdown, beta and tracking error.

Historical Trade Scenario Simulator, GitHub | historical-trade-sim.vercel.app 2026

- Built a lump-sum and DCA trade simulator (React, TypeScript, Tailwind, FastAPI, PostgreSQL) for 12 stocks and ETFs with price history back to 2010, on real prices from **Tiingo** with a **Yahoo Finance** fallback.
- Passed **76 tests** across 4 suites and hardened the API with per-IP rate limits (120 req/min), a 64 KB body cap, security headers and a daily **GitHub Actions** cron for price refresh and 30-day TTL cleanup.

FridgeFit – Cross-Platform Mobile App, GitHub 2026

- Completed 6 of 8 milestones of a cross-platform recipe app in **Expo SDK 54**, **React Native 0.81**, TypeScript, Zustand and Expo SQLite: ingredient-match recipe discovery, recipe detail, favorites, diet and allergen filters, and onboarding, with core flows tested on real devices.

Top 50 Vietnamese Music Videos (first-repo-live.vercel.app | GitHub): Next.js 16 app on the **YouTube Data API v3** with a quota-aware MongoDB daily-snapshot cache (30-day TTL) and Shorts filtering.

Also: a Manifest V3 **Chrome extension** with dynamic site-blocking rules; **Connect Four**, a team course project in Java MVC with Observer, Strategy, Factory and Command patterns and JUnit tests; **ESP32-C3 firmware** in C and RISC-V Assembly with FreeRTOS.

Technical Skills

- **Languages**: TypeScript, JavaScript, Python, Java, SQL, HTML/CSS, DAX, C/C++
- **Web & Mobile**: React, Next.js, Node.js, Vite, Tailwind CSS, Redux Toolkit, React Native/Expo, FastAPI, Spring Boot
- **Data & Analytics**: Power BI (DAX, Power Query), Excel, pandas, PostgreSQL, MongoDB, MySQL, SQL Server
- **Learning Technology**: SCORM 2004 / 1.2, SCORM Cloud testing, LMS administration, e-learning packaging
- **AI & Automation**: Claude Code agent orchestration, MCP, prompt engineering, Microsoft Copilot, Whisper
- **SEO**: technical SEO, JSON-LD / Schema.org, canonicals, sitemaps, robots.txt, Google Search Console
- **Testing & DevOps**: Playwright, Vitest, Pytest, JUnit, GitHub Actions, Docker, Vercel, Netlify, Git/GitHub
- **Productivity & Media**: Microsoft 365 (Excel, PowerPoint, SharePoint, Teams), Adobe Premiere Pro

Additional Information

- **Languages**: English (Native), French (Fluent), Vietnamese (Advanced)
- **Interests**: Basketball, Volleyball, Badminton, Rock Climbing, Weightlifting, Cooking, Music
